# **CWE Top 25 2020 Perspective**

Categories	6 Security Vulnerabilities	Security Hotspots
[15] CWE-434 - Unrestricted Upload of File with Dangerous Type	<del>-</del>	-
[16] CWE-732 - Incorrect Permission Assignment for Critical Resource	O A	O A
[17] CWE-94 - Improper Control of Generation of Code ('Code Injection')	-	-
[18] CWE-522 - Insufficiently Protected Credentials	O A	O A
[19] CWE-611 - Improper Restriction of XML External Entity Reference ('XXE')	0	O A
[20] CWE-798 - Use of Hard-coded Credentials	O A	O A
[21] CWE-502 - Deserialization of Untrusted Data	-	-
[22] CWE-269 - Improper Privilege Management	-	_
[23] CWE-400 - Uncontrolled Resource Consumption ('Resource Exhaustion')	-	-
[24] CWE-306 - Missing Authentication for Critical Function	<u>-</u>	<del>-</del>
[25] CWE-862 - Missing Authorization	<u>-</u>	-

## **Definitions**

## Vulnerability

A point in your code that's open to attack and requires immediate action.

## **Security Rating**

The Security Rating is based on the number and severity of Vulnerabilities

- O Vulnerabilities
- at least 1 Minor Vulnerability
- at least 1 Major Vulnerability
- at least 1 Critical Vulnerability
- at least 1 Blocker Vulnerability

## **Security Hotspot**

Security-sensitive code that requires manual review to assess whether or not a vulnerability exists.

## **Security Review Rating**

The Security Review Rating is a letter grade based on the percentage of Reviewed (Fixed or Safe) Security Hotspots. The thresholds are:

- **A** 80%
- B 70%
- **6** 50%
- **D** 30%
- **6** below 30%

#### **New Code**

The Clean as You Code approach focuses on New Code that has been added or changed recently and ensuring that this code is clean and safe.

In this approach, New Code has fewer issues as it's the developers' primary focus.
